Quigley Lab – UCSF School of Medicine

Dear Hiring Committee,

I am excited to apply for the Bioinformatics Specialist position with the Quigley Lab at UCSF School of Medicine. I am currently a biochemistry student with a minor in data science at The College of Idaho, and through both research and independent projects I have become very interested in computational cancer biology and bioinformatics. Your lab's work studying therapy resistance and genomic alterations in advanced prostate cancer strongly connects with the type of translational research I hope to pursue long term.

Over the past year, I have developed experience in both computational analysis and laboratory research. In a personal project focused on prostate cancer progression. I used Python and machine learning techniques to analyze clinical and genomic data, build classification and regression models, and investigate factors associated with genomic instability and survival outcomes. Through this project, I gained experience working with pandas, scikit-learn, data visualization, preprocessing pipelines, and model evaluation while also strengthening my ability to interpret biologically meaningful trends in data.

In addition to computational work, I have conducted laboratory research through the Cloninger Lab at Montana State University, where I worked with techniques including SDS-PAGE, western blotting, protein purification, and E. coli expression. This experience helped me become more comfortable with experimental design, maintaining organized documentation, and collaborating in a research environment. I enjoy the problem solving side of research and appreciate how computational and experimental work can be utilized on the same project.

What draws me most to this opportunity is the chance to contribute to meaningful cancer research while continuing to grow technically as a researcher. I am particularly interested in expanding my experience with genomics analysis, bioinformatics workflows, and large biological datasets in a collaborative environment like the Quigley Lab.

Thank you for your time and consideration. I would be grateful for the opportunity to contribute to your team and further discuss how my background and interests align with this position.

Sincerely,

Maddie Mann
